

LOCAL SURCHARGES 1919-21

ISSUES.

The philatelic trade tended to view that the 1914 REPUBLICA overprints of old currency stock was little more than a money raising exercise. The new currency ceres issue was already in circulation and the last thing the postal service needed was an extensive range of awkward reis values requiring a recalculation of 10 reis for 1 centave. Anyway, some of this stock remained unsold in Angola and so, to sell off what remained, it was decided to apply a surcharge with useful postal rates in the new currency, including two little used ceres issues. The stamps were surcharged with the new currency values, and applied locally in Luanda, Angola.

ERRORS.

The usual displaced, inverted and doubled printer's waste found its way onto the market. The most common errors are listed below.

The use of different type face for the fraction has produced a range of fraction errors:

1. Deformed 2 and broken /, right. Left normal. Shortened / also exists

2. Narrow 2, left. Right normal.

3. Leaning 2, right, on the dark violet variety

FANCIFUL ISSUES

At the time of the release of the 1921 overprints, a number of Carlos Mouchon and Manoel surcharges found their way onto the market; they often come with a crisp corner cancel. The surcharge takes the same form as the officially released stamps. A series of Ceres issues also appeared, surcharged exactly as the official release. Some Luis and Carlos Neto surcharges also appeared - Scott d type. A set of these was listed in Scott, 230-233, but were later delisted when it was discovered that they were not officially released. They often come with a crisp on the nose 30DEZ921 Luanda cancel. These issues were obviously (illegally??) created at the time for the philatelic market. Known examples:
